CURRENT AND PAST RESEARCH FUNDING

Project#: Pending (PI: Sloan) 09/15-08/18
Funding Agency: Congressionally Directed Medical Research Programs, Psychological Health/Traumatic Brain Injury Research Program \$2,500,000
Title: Brief Treatment for PTSD: Enhancing Treatment Engagement and Retention
The primary aim of the study is to examine whether a brief, 5 session narrative therapy approach, called Written Exposure Therapy, is as equally efficacious (i.e., noninferior) as Cognitive Processing Therapy in reducing PTSD symptoms among active duty service members (N = 150) with a diagnosis of combat-related PTSD.
Role: Co-Principal Investigator

Project#: Pending (PI: Foa) 09/15-08/18
Funding Agency: Congressionally Directed Medical Research Programs, Psychological Health/Traumatic Brain Injury Research Program \$2,500,000
Title: Efficacy of 90-Minute vs 60-Minute Sessions of Prolonged Exposure for PTSD
The primary aim of the study is to conduct a 2-group randomized controlled trial to investigate the noninferiority of 60-minute vs 90-minute sessions of Prolonged Exposure for combat-related PTSD in active-duty military personnel (N = 160) with a diagnosis of combat-related PTSD and to examine the mechanisms underlying response to PE condition.
Role: Co-Principal Investigator

Project#: 1R01AT008422-01 (PI: D. McGeary) 09/14-08/19
Funding Agency: National Institutes of Health (NCCAM) \$2,800,000
Title: Establishing Efficacy of A Functional-Restoration CAM Pain Management Program in a Combat Injured Veterans Population
The purpose of this study is to assess (1) the efficacy of a functional restoration program for improved pain management outcomes in polymorbid OEF/OIF/OND Veterans (N=130) with chronic low back pain as compared to standard polytrauma rehabilitation care, and (2) decreasing the rate of chronic opioid therapy.
Role: Co-Principal Investigator

Project#: 14364001 (PI: DeVoe) 09/14-08/18
Funding Agency: Military Operational Medicine Research Program \$4,535,000
Title: Supporting Military Families with Young Children throughout the Deployment Lifecycle
The purpose of this study is to adapt and test Strong Families Strong Forces program to strengthen and support family relationships throughout the deployment cycle for active duty military families with an emphasis on parenting and co-parenting processes, and support needs, during the pre- and deployment phases.
Role: Partnering Principal Investigator

Project#: 14364001 (PI: Foa) 09/13-08/18
Funding Agency: Military Operational Medicine Research Program \$7,200,000
Title: Implementation of Prolonged Exposure in the Army: Is consultation necessary for effective dissemination?

The purpose of this study is to examine if evidence-based therapies, such as Prolonged Exposure (PE) for posttraumatic stress disorder (PTSD) can be successfully disseminate and implement in the Army by comparing two PE training models: Minimal PE training (workshop only) and Comprehensive PE training (workshop plus consultation).

Role: Co-Investigator

Project #: W81XWH-13-2-0065 (PI: Peterson) 09/13-08/20
Funding Agency: DoD Psychological Health and TBI Research Program, Congressionally Directed Medical Research Program and Department of Veteran Affairs \$45,000,000
Title: The Consortium to Alleviate PTSD (CAP)

The overarching goals of the Consortium to Alleviate PTSD (CAP) are to improve the psychological and physical health and well-being of Service Members (Active Duty, National Guard, and Reserve) and Veterans who have deployed in support of OEF/OIF/OND by developing and evaluating the most effective diagnostic, prognostic, prevention, treatment, and rehabilitative strategies for combat-related PTSD and comorbid conditions.

W81XWH-13-2-0013 (PI: Resick; Partnering PI: Peterson) 01/13-12/16
DoD PTSD and TBI Research Program \$3,381,742
Variable-Length Cognitive Processing Therapy for Combat-Related PTSD

The purpose of this study is to determine if Service Members reach good end-state functioning at varying lengths of CPT-C treatment and characterize the distribution of response (i.e., early, standard, late, or non-responders), to examine predictors (e.g., military factors, trauma history, internalizing/externalizing personality characteristics, cognitive flexibility, readiness to change) of dose of treatment and treatment success, and to examine secondary outcomes (e.g., social/family functioning, aggression, health-risk behaviors) of variable-length CPT treatment.

Role: Partnering Principal Investigator

W81XWH-12-2-0073 (PI: Peterson) 09/12– 08/16
DoD PTSD and TBI Research Program \$2,499,998
Clinical Effectiveness Trial of In-Home Cognitive Processing Therapy for Combat-Related PTSD

The purpose of this study is to conduct a randomized clinical trial to evaluate the clinical and cost effectiveness of in-home cognitive processing therapy (CPT) delivered face-to-face or with tele-behavioral health compared to standard in-office care for Service Members and Veterans with combat-related PTSD.

Role: Principal Investigator

FA8650-13-2-6408 (PI: Baker; Partnering PI: Peterson) 09/12– 08/15
Air Force Medical Support Agency \$1,408,975
OIF/OEF Psychiatric MEDEVACs

The purpose of this project is to conduct a retrospective analysis of psychological assessments of U.S. military personnel in Iraq prior to Aeromedical Evacuations and determine long-term impact of psychiatric Aeromedical Evacuations out of Iraq and Afghanistan over the past 10 years.

Role: Co-Principal Investigator

FA86-50-11-2-6162 (PI: Baker; Partnering PI: Peterson) 11/10– 10/13
USAF Aerospace Medicine and Human Performance Integration Research \$886,972
Project BLAST: the Balad/Bagram Longitudinal Assessment of the Symptoms of
TBI/PTSD/ASD

The primary aim of Project BLAST is to conduct both retrospective and prospective analyses of the symptoms and symptom clusters in Traumatic Brain Injury, Posttraumatic Stress Disorder, and Acute Stress Disorder in an attempt to disentangle these signature injuries in Iraq and Afghanistan war veterans.

Role: Co-Principal Investigator

W81XWH-09-PH/TBIRP-IIRA (PI: Taylor) 09/10 – 08/14
DoD PTSD and TBI Research Program \$649,248

In-Person or Internet Cognitive-Behavioral Therapy of Insomnia

The aims of this project were to compare six sessions of Internet and in-person cognitive behavior therapy of insomnia to a wait list control within an active military population. Both primary and comorbid insomnia were to be included. Outcome measures include insomnia, depression, substance abuse, and PTSD symptoms.

Role: Partnering Principal Investigator

FA7014-09-C-0026 (PI: Peterson) 9/09 – 9/10
U.S. Air Force \$481,540
Prolonged Exposure Therapy and Cognitive Processing Therapy for Posttraumatic Stress
Disorder

The purpose of this contract was to train military mental health providers in the use of prolonged exposure for the treatment of combat-related PTSD. Bi-weekly clinical consultation was conducted for all individuals who completed the workshops over the subsequent 12 months.

Role: Program Director

W81XWH-09-1-0569 (PI: Rudd) 9/09 - 8/12
